

## 24-BIT, 192-kHz SAMPLING, ADVANCED SEGMENT, AUDIO STEREO DIGITAL-TO-ANALOG CONVERTER

### FEATURES

- 24-Bit Resolution
- Analog Performance:
  - Dynamic Range: 123 dB
  - THD+N: 0.0005%
- Differential Current Output: 4 mA p-p
- 8× Oversampling Digital Filter:
  - Stop-Band Attenuation: –98 dB
  - Pass-Band Ripple: ±0.0002 dB
- Sampling Frequency: 10 kHz to 200 kHz
- System Clock: 128, 192, 256, 384, 512, or 768 f<sub>S</sub> With Autodetect
- Accepts 16- and 24-Bit Audio Data
- PCM Data Formats: Standard, I<sup>2</sup>S, and Left-Justified
- Interface Available for Optional External Digital Filter or DSP
- Digital De-Emphasis
- Digital Filter Rolloff: Sharp or Slow
- Soft Mute
- Zero Flag
- Dual-Supply Operation: 5-V Analog, 3.3-V Digital

- 5-V Tolerant Digital Inputs
- Small 28-Lead SSOP Package
- Pin Assignment Compatible With PCM1794

### APPLICATIONS

- A/V Receivers
- DVD Players
- Musical Instruments
- HDTV Receivers
- Car Audio Systems
- Digital Multitrack Recorders
- Other Applications Requiring 24-Bit Audio

### DESCRIPTION

The PCM1798 is a monolithic CMOS integrated circuit that includes stereo digital-to-analog converters and support circuitry in a small 28-lead SSOP package. The data converters use TI's advanced segment DAC architecture to achieve excellent dynamic performance and improved tolerance to clock jitter. The PCM1798 provides balanced current outputs, allowing the user to optimize analog performance externally. Sampling rates up to 200 kHz are supported.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

**ORDERING INFORMATION**

PRODUCT	PACKAGE	PACKAGE CODE	OPERATION TEMPERATURE RANGE	PACKAGE MARKING	ORDERING NUMBER	TRANSPORT MEDIA
PCM1798DB	28-lead SSOP	28DB	–25°C to 85°C	PCM1798	PCM1798DB	Tube
					PCM1798DBR	Tape and reel

**ABSOLUTE MAXIMUM RATINGS**over operating free-air temperature range unless otherwise noted<sup>(1)</sup>

		PCM1798
Supply voltage	$V_{CC1}, V_{CC2L}, V_{CC2R}$	–0.3 V to 6.5 V
	$V_{DD}$	–0.3 V to 4 V
Supply voltage differences: $V_{CC1}, V_{CC2L}, V_{CC2R}$		±0.1 V
Ground voltage differences: AGND1, AGND2, AGND3L, AGND3R, DGND		±0.1 V
Digital input voltage	LRCK, DATA, BCK, SCK, FMT1, FMT0, MONO, CHSL, DEM, MUTE, RST,	–0.3 V to 6.5 V
	ZERO	–0.3 V to $(V_{DD} + 0.3 \text{ V}) < 4 \text{ V}$
Analog input voltage		–0.3 V to $(V_{CC} + 0.3 \text{ V}) < 6.5 \text{ V}$
Input current (any pins except supplies)		±10 mA
Ambient temperature under bias		–40°C to 125°C
Storage temperature		–55°C to 150°C
Junction temperature		150°C
Lead temperature (soldering)		260°C, 5 s
Package temperature (IR reflow, peak)		260°C

(1) Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

## SYSTEM CLOCK AND RESET FUNCTIONS

### System Clock Input

The PCM1798 requires a system clock for operating the digital interpolation filters and advanced segment DAC modulators. The system clock is applied at the SCK input (pin 7). The PCM1798 has a system clock detection circuit that automatically senses the frequency at which the system clock is operating. Table 1 shows examples of system clock frequencies for common audio sampling rates.

Figure 18 shows the timing requirements for the system clock input. For optimal performance, it is important to use a clock source with low phase jitter and noise. One of the Texas Instruments PLL1700 family of multiclock generators is an excellent choice for providing the PCM1798 system clock.

**Table 1. System Clock Rates for Common Audio Sampling Frequencies**

SAMPLING FREQUENCY	SYSTEM CLOCK FREQUENCY (f <sub>SCK</sub> ) (MHz)					
	128 f <sub>S</sub>	192 f <sub>S</sub>	256 f <sub>S</sub>	384 f <sub>S</sub>	512 f <sub>S</sub>	768 f <sub>S</sub>
32 kHz	4.096	6.144	8.192	12.288	16.384	24.576
44.1 kHz	5.6488	8.4672	11.2896	16.9344	22.5792	33.8688
48 kHz	6.144	9.216	12.288	18.432	24.576	36.864
96 kHz	12.288	18.432	24.576	36.864	49.152	73.728
192 kHz	24.576	36.864	49.152	73.728	-(1)	-(1)

(1) This system clock rate is not supported for the given sampling frequency.

PARAMETERS		MIN	MAX	UNITS
$t_{(SCY)}$	System clock pulse cycle time	13		ns
$t_{(SCKH)}$	System clock pulse duration, HIGH	$0.4t_{(SCY)}$		ns
$t_{(SCKL)}$	System clock pulse duration, LOW	$0.4t_{(SCY)}$		ns

**Figure 18. System Clock Input Timing**

### Power-On and External Reset Functions

The PCM1798 includes a power-on reset function. Figure 19 shows the operation of this function. With  $V_{DD} > 2\text{ V}$ , the power-on reset function is enabled. The initialization sequence requires 1024 system clocks from the time  $V_{DD} > 2\text{ V}$ .

The PCM1798 also includes an external reset capability using the  $\overline{\text{RST}}$  input (pin 14). This allows an external controller or master reset circuit to force the PCM1798 to initialize to its default reset state.

Figure 20 shows the external reset operation and timing. The  $\overline{\text{RST}}$  pin is set to logic 0 for a minimum of 20 ns. The  $\overline{\text{RST}}$  pin is then set to a logic 1 state, thus starting the initialization sequence, which requires 1024 system clock periods. The external reset is especially useful in applications where there is a delay between the PCM1798 power up and system clock activation.

Figure 19. Power-On Reset Timing

PARAMETERS		MIN	MAX	UNITS
$t(\text{RST})$	Reset pulse duration, LOW	20		ns

Figure 20. External Reset Timing

## AUDIO DATA INTERFACE

### Audio Serial Interface

The audio interface port is a 3-wire serial port. It includes LRCK (pin 4), BCK (pin 6), and DATA (pin 5). BCK is the serial audio bit clock, and it is used to clock the serial data present on DATA into the serial shift register of the audio interface. Serial data is clocked into the PCM1798 on the rising edge of BCK. LRCK is the serial audio left/right word clock.

The PCM1798 requires the synchronization of LRCK and the system clock, but does not need a specific phase relation between LRCK and the system clock.

If the relationship between LRCK and the system clock changes more than  $\pm 6$  BCK, internal operation is initialized within  $1/f_S$  and the analog outputs are forced to the bipolar zero level until resynchronization between LRCK and the system clock is completed.

### PCM Audio Data Formats and Timing

The PCM1798 supports industry-standard audio data formats, including standard right-justified, I<sup>2</sup>S, and left-justified. The data formats are shown in Figure 22. Data formats are selected using FMT0 (pin 11) and FMT1 (pin 12) as shown in Table 2. All formats require binary two's-complement, MSB-first audio data. Figure 21 shows a detailed timing diagram for the serial audio interface.

PARAMETERS		MIN	MAX	UNITS
$t(BCY)$	BCK pulse cycle time	70		ns
$t(BCL)$	BCK pulse duration, LOW	30		ns
$t(BCH)$	BCK pulse duration, HIGH	30		ns
$t(BL)$	BCK rising edge to LRCK edge	10		ns
$t(LB)$	LRCK edge to BCK rising edge	10		ns
$t(DS)$	DATA setup time	10		ns
$t(DH)$	DATA hold time	10		ns
—	LRCK clock data	50% $\pm$ 2 bit clocks

Figure 22. Audio Data Input Formats

## FUNCTION DESCRIPTIONS

### Audio data format

Audio format is selected using FMT0 (pin 11) and FMT1 (pin 12). The PCM1798 also supports monaural mode and DF bypass mode using MONO (pin 1) and CHSL (pin 2). The PCM1798 can select the DF rolloff characteristics.

**Table 2. Audio Data Format Select**

MONO	CHSL	FMT1	FMT0	FORMAT	STEREO/MONO	DF ROLLOFF
0	0	0	0	I <sup>2</sup> S	Stereo	Sharp
0	0	0	1	Left-justified format	Stereo	Sharp
0	0	1	0	Standard, 16-bit	Stereo	Sharp
0	0	1	1	Standard, 24-bit	Stereo	Sharp
0	1	0	0	I <sup>2</sup> S	Stereo	Slow
0	1	0	1	Left-justified format	Stereo	Slow
0	1	1	0	Standard, 16-bit	Stereo	Slow
0	1	1	1	Digital filter bypass	Mono	–
1	0	0	0	I <sup>2</sup> S	Mono, L-channel	Sharp
1	0	0	1	Left-justified format	Mono, L-channel	Sharp
1	0	1	0	Standard, 16-bit	Mono, L-channel	Sharp
1	0	1	1	Standard, 24-bit	Mono, L-channel	Sharp
1	1	0	0	I <sup>2</sup> S	Mono, R-channel	Sharp
1	1	0	1	Left-justified format	Mono, R-channel	Sharp
1	1	1	0	Standard, 16-bit	Mono, R-channel	Sharp
1	1	1	1	Standard, 24-bit	Mono, R-channel	Sharp

### Soft Mute

The PCM1798 supports mute operation. When MUTE (pin 10) is set to HIGH, both analog outputs are transitioned to the bipolar zero level in –0.5-dB steps with a transition speed of  $1/f_s$  per step. This system provides pop-free muting of the DAC output.

### De-Emphasis

The PCM1798 has a de-emphasis filter for the sampling frequency of 44.1 kHz. The de-emphasis filter is controlled using DEM (pin 3).

### Zero Detection

When the PCM1798 detects that the audio input data in the L-channel and the R-channel is continuously zero for 1024 LRCKs in the PCM mode, or that the audio input data is continuously zero for 1024 WDCKs in the external filter mode, the PCM1798 sets ZERO (pin 13) to HIGH.

## APPLICATION INFORMATION

## TYPICAL CONNECTION DIAGRAM

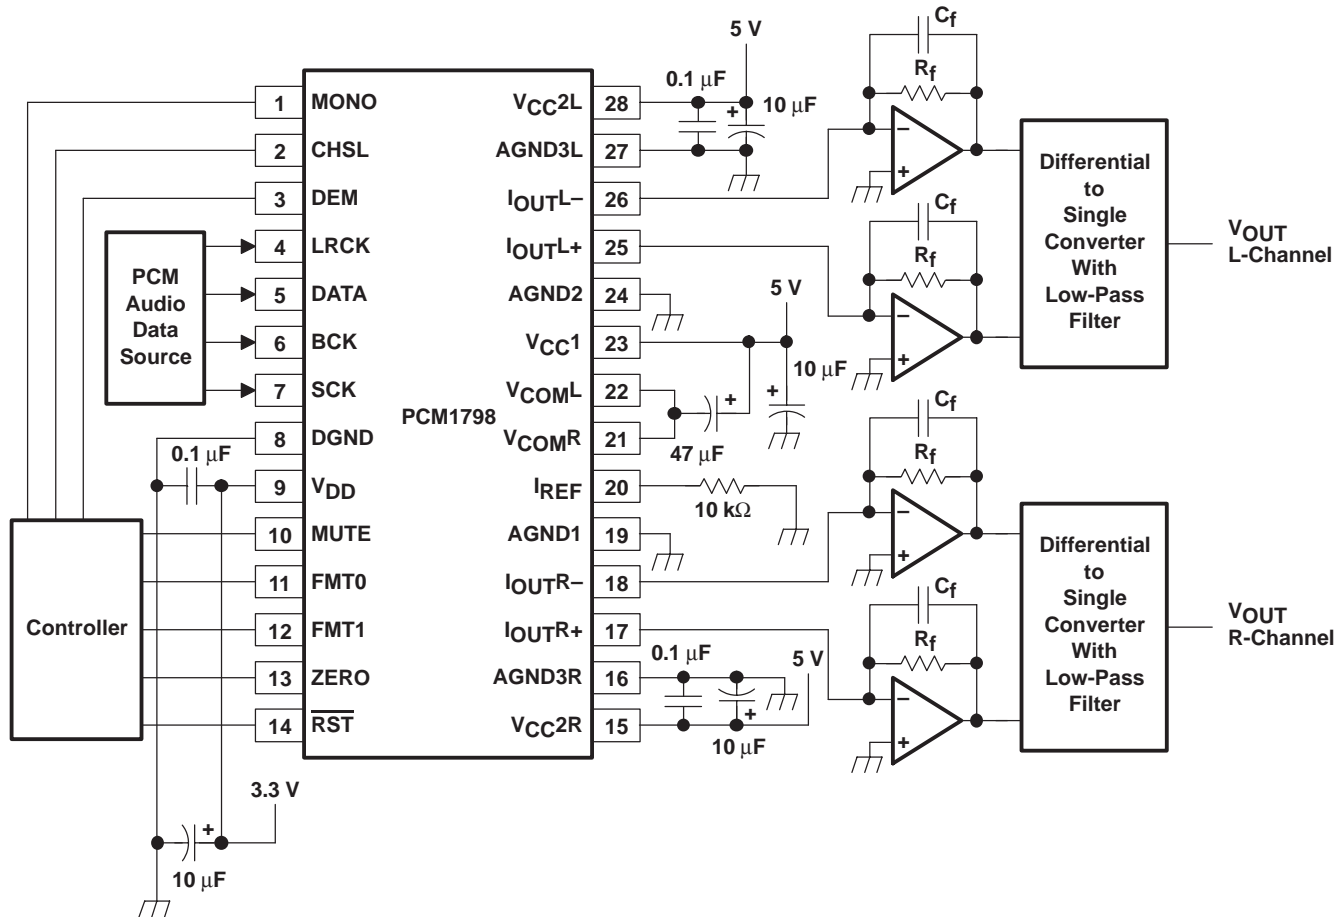

Figure 23. Typical Application Circuit

## APPLICATION CIRCUIT

The design of the application circuit is very important in order to actually realize the high S/N ratio of which the PCM1798 is capable. This is because noise and distortion that are generated in an application circuit are not negligible.

In the third-order LPF circuit of Figure 24, the output level is 2.1 V RMS, and 123 dB S/N is achieved.

## I/V Section

The current of the PCM1798 on each of the output pins ( $I_{OUTL+}$ ,  $I_{OUTL-}$ ,  $I_{OUTR+}$ ,  $I_{OUTR-}$ ) is 4 mA p-p at 0 dB (full scale). The voltage output level of the I/V converter ( $V_i$ ) is given by following equation:

$$V_i = 4 \text{ mA p-p} \times R_f \text{ (} R_f \text{ : feedback resistance of I/V converter)}$$

An NE5534 operational amplifier is recommended for the I/V circuit to obtain the specified performance. Dynamic performance such as the gain bandwidth, settling time, and slew rate of the operational amplifier affects the audio dynamic performance of the I/V section.

## Differential Section

The PCM1798 voltage outputs are followed by differential amplifier stages, which sum the differential signals for each channel, creating a single-ended I/V op-amp output. In addition, the differential amplifiers provide a low-pass filter function.

The operational amplifier recommended for the differential circuit is the low-noise type.

Figure 24. Measurement Circuit

Figure 25. Measurement Circuit for Monaural Mode

## APPLICATION FOR EXTERNAL DIGITAL FILTER INTERFACE

Figure 26. Connection Diagram for External Digital Filter (Internal DF Bypass Mode) Application

### Application for Interfacing With an External Digital Filter

For some applications, it may be desirable to use a programmable digital signal processor as an external digital filter to perform the interpolation function. The following pin settings enable the external digital filter application mode.

- MONO (pin 1) = LOW
- CHSL (Pin 2) = HIGH
- FMT0 (Pin 11) = HIGH
- FMT1 (pin 12) = HIGH

The pins used to provide the serial interface for the external digital filter are shown in the connection diagram of Figure 26. The word clock (WDCK) must be operated at  $8\times$  or  $4\times$  the desired sampling frequency,  $f_s$ .

### Pin Assignment When Using the External Digital Filter Interface

- LRCK (pin 4): WDCK as word clock input
- DATA (pin 5): Monaural audio data input
- BCK (pin 6): Bit clock input

**Audio Format**

The PCM1798 in the external digital filter interface mode supports the 24-bit right-justified audio format as shown in Figure 27.

**Figure 27. Audio Data Input Format for External Digital Filter (Internal DF Bypass Mode) Application**

**System Clock (SCK) and Interface Timing**

The PCM1798 in an application using an external digital filter requires the synchronization of WDCK and the system clock. The system clock is phase-free with respect to WDCK. Interface timing among WDCK, BCK, and DATA is shown in Figure 28.

PARAMETER	MIN	MAX	UNITS
t(BCY) BCK pulse cycle time	20		ns
t(BCL) BCK pulse duration, LOW	7		ns
t(BCH) BCK pulse duration, HIGH	7		ns
t(BL) BCK rising edge to WDCK falling edge	5		ns
t(LB) WDCK falling edge to BCK rising edge	5		ns
t(DS) DATA setup time	5		ns
t(DH) DATA hold time	5		ns

**Figure 28. Audio Interface Timing for External Digital Filter (Internal DF Bypass Mode) Application**

## ANALOG OUTPUT

Table 3 and Figure 29 show the relationship between the digital input code and analog output.

**Table 3. Analog Output Current and Voltage**

	800000 (-FS)	000000 (BPZ)	7FFFFFFF (+FS)
$I_{OUTN}$ [mA]	-1.5	-3.5	-5.5
$I_{OUTP}$ [mA]	-5.5	-3.5	-1.5
$V_{OUTN}$ [V]	-1.23	-2.87	-4.51
$V_{OUTP}$ [V]	-4.51	-2.87	-1.23
$V_{OUT}$ [V]	-2.98	0	2.98

NOTE:  $V_{OUTN}$  is the output of U1,  $V_{OUTP}$  is the output of U2, and  $V_{OUT}$  is the output of U3 in the measurement circuit of Figure 24.

**Figure 29. The Relationship Between Digital Input and Analog Output**

**PACKAGING INFORMATION**

PCM1798DB	ACTIVE	SSOP	DB	28	47	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM
PCM1798DBG4	ACTIVE	SSOP	DB	28	47	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM
PCM1798DBR	ACTIVE	SSOP	DB	28	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM
PCM1798DBRG4	ACTIVE	SSOP	DB	28	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

DB (R-PDSO-G\*\*)

PLASTIC SMALL-OUTLINE

28 PINS SHOWN

- NOTES: A. All linear dimensions are in millimeters.  
 B. This drawing is subject to change without notice.  
 C. Body dimensions do not include mold flash or protrusion not to exceed 0,15.  
 D. Falls within JEDEC MO-150

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
